The Lakhovsky Multiple Wave Oscillator Secrets Revealed

Fourth edition

Bruno Sacco
Tony Kerselaers

MULTI WAVE RESEARCH

“***The important physical phenomena that has been given to me to be discovered and which are not yet conveniently studied deeply for lack of suitable instruments (wave meters, mirror galvanometer, tubes filled of rare gas or to different rarefaction, localizers, micro-voltmeters, ohmmeters, etc.), make me to believe that its scientific importance will be recognized in future as extraordinary.*** “

Doctor Nicola Gentile
(About the Lakhovsky MWO, Medicina Nuova, 1935)

Fourth Edition, spring 2016

All brand names and product names used in this book are trade names, service marks, trademarks or registered trademarks of their respective owners. The authors are not associated with any product or vendor mentioned in this book. This publication is designed to provide accurate and authoritative information in regard to the subject matter covered. If professional advice or other expert assistance is required, the services of a competent professional should be sought.

DISCLAIMER

This book is a research publication of Multi Wave Research. It contains accurate analysis of the original Lakhovsky Multiple Wave Oscillator produced by C.O.L.Y.S.A. in France during 1931 and 1940. Relevant original documents are translated and added to this book. The discussed material is never been published before and it provides the knowledge to build Lakhovsky Multiple Wave Oscillators and open doors for further experimentation in this field by competent researchers.
Read this book thoroughly before undertake any experiments. High frequency, high voltage electric apparatus can cause serious shock injury or death and should only be handled by knowledgeable, competent people. All experiments are conducted solely at your own risk. We disclaim any responsibility for the use or misuse of any information in this book. While this book touches on the subject of human health, all information should be considered as anecdotal and should not in any way be used to construct a medical device. We are not qualified to give medical advice and the use of experimental equipment and research techniques described in this book may provide a false sense of security wherein one may neglect medical care.
Important: it must be kept in mind that experiments with Tesla coil like devices (as with all high frequency emitting devices) can result in serious faults to nearby electronic devices. The generated interference to life sustaining devices, including pacemakers, can result in injury or death.

About the Authors

Bruno Sacco is an Electrical Radio Engineer. He graduated at Politecnico di Torino in 1988. He has been working at Alenia-Galileo where he was involved in antennas and radar measurement systems. Now he works for RAI Research Center (Radio and TV) where he is involved in digital transmission, RF design and laboratory measurements.

Tony Kerselaers is an Electrical Radio Engineer. He graduated at HIDN Mechelen in 1980. He has been working for Philips Electronics for many years on RF products and antenna systems. He works currently for NXP Semiconductors on antennas, communication systems and personal health products. Tony filed 40+ patents in this field.

Authors' Acknowledgments

The authors give heartfelt thanks to Jean Claude Dupuy, our colleague researcher, Roger Blain, researcher and MWO member of the first hour and Mr. Gianfranco Galvani of the Rimini Lakhovsky Center in Italy. We are grateful for the support by the many consulted specialists and especially to Dr. Massimo Balma, Prof. Pierluigi Civera, Dr. Prof. Franco Bistolfi and Prof. Mauro Brescia and Dr. Massimo Nardi for long and interesting technical and historical discussions. To Luciano Bezerédy, who knew Boris Vassileff and witnessed the use of MWO, for his kind cooperation. Additionally we like to thank Guy Thieux for providing his historical letters.
Finally the authors wish to thank their families, who once again put their lives on hold during many travels and hours spend on research.

Table of contents

1 Introduction 12

1 Introduction

There are dozens of websites that will tell you that their “Lakhovsky Multiple Wave Oscillator" (MWO) works like Georges Lakhovsky's machines did. From site to site everyone has a different opinion making it almost impossible for anyone to know how the Lakhovsky’s original MWO worked. Several modern devices that are claimed to be "Lakhovsky Multiple Wave Oscillators" can be found for sale on the internet from different suppliers. Isn’t it strange that they all look differently and have different specifications? How can this be, since manufacturers say these are all Lakhovsky Multiple Wave Oscillators? At least we can say that it is not clear whether they are really designed to operate according to the specifications of Georges Lakhovsky. The "modern" post world-war II story of the Multiple Wave Oscillator is not a happy one. We learned that in 1963 Mr. Bob Beck claimed to have discovered an original Multiple Wave Oscillator stored in the basement of a Californian hospital. From this discovery the Multiple Wave Oscillator revival began. The Borderland's book "The Lakhovsky MWO Handbook" provides an overview of that period: a generation of experimenters started to build many various home-made MWO's, to speculate on how the original device was made, how the antenna rings were sized, etc. We'd like to polemize a bit with Bob Beck: why didn't he disclose the original MWO details? Why we never saw any pictures? Why is it not mentioned that the discovered machine had no C.O.L.Y.S.A. label, thus not identifying it as a genuine Lakhovsky device? A new generation of experimenters, including ourselves, has wasted time and energies in speculating, discussing and building MWO’s that have little or nothing to do with the real original design.

Why this eBook?

Although many articles and publications can be found over the Internet, and even the original books of Georges Lakhovsky can still be found in antiquarian bookshops, one soon realizes that such documents do not describe how the machine is made and how it operates. The Lakhovsky patents are accessible too, but they don’t give detailed information on the MWO construction parameters (coils and antennas sizes, etc.). It seems that Georges Lakhovsky wanted to hide the details of his inventions.

The first milestone in the path to the revelation of the MWO original machine details has been set by the eBook (in French) ”La Révélation” edited by our friend and colleague Jean Claude Dupuy, where he accurately describes the mechanical and electrical structure of an original vintage MWO, found in a flea market in France. The Jean Claude’s eBook also includes some relevant documentation (in French) about the use of the MWO.

The present eBook is a further step beyond, evolving from “La Révélation": We report work that has been done after that first discovery in France. Since then, we analyzed the structure of that MWO and made replica machines as close as possible to the original design. But the breakthrough was the discovery of three original MWO units in Italy. In post-World War II, Dr. Boris H. Vassileff, a Bulgarian born Italian Doctor,

had been using these machines for many years. This discovery is even more valuable since Dr. Vassileff established three medical offices where he gave Lakhovsky therapy until he passed away in the eighties. Dr. Vassileff's tutor was Dr. Vittorio De Cigna, who pioneered the introduction and the use of the MWO in Italy in the thirties. One of the original units that we discovered, the older one, was most probably previously owned by Dr. De Cigna himself. We owe special gratitude to Mr. Gianfranco Galvani, director of "*Centro Studi George Lakhovsky"* in Rimini, Italy (devoted to Geobiology) who made the discovery possible of the three units from Dr. Vassileff descendants.

The availability of the said original MWOs enabled us to thoroughly analyze "*the*" Multiple Wave Oscillator. We finally could do a deep "reverse engineering" of the device and do several electric tests with professional laboratory instruments.

In our research we also found some of the publications that Dr. Vassileff made in Italy about the use of the Multiple Wave Oscillator and we translated the important sections. Unpublished documents were found containing information on how the machines where designed and produced during the years 1932 - 1942 by the Laboratories C.O.L.Y.S.A. (Circuits Oscillants Lakhovsky Societé Anonime), Georges Lakhovsky's former company in Paris. We also discovered an inventory list of C.O.L.Y.S.A. of all produced machines and the people who received these machines. In this research a great role has being played by our colleague Jean Claude Dupuy who was able to bring to light many ancient documents, in French, including the original user instructions for the COLYSA MWO's.

In this eBook we report deep technical analysis of the Georges Lakhovsky Multiple Wave Oscillator: machine, components, use cases, and examples how to construct replicas. A number of recovered vintage documents excerpts are also included in original and translated from French or Italian into English.

Dr. Boris H. Vassilleff

The scientist Boris Hadzhi Vassileff is born in Bulgaria in January 23, 1896 near the border with Romania. Vassileff was a brilliant scientist and founded in 1924 the first World Central Dispensary Center for prophylaxis, diagnosis and medical treatment of some cancers. His contributions to scientific and social studies in the fight against cancer and many articles and publications all over the world are considered the cornerstone in the field of oncology. He owned three Italian university degrees; Doctor of Medicine, Doctor in Law and Doctor of Social Sciences Economics and Policy. He was a pioneer in Italy in cancer treatment by the method of electromagnetic waves by Lakhovsky's multiple wave oscillators. Dr. Boris H. Vassileff and Prof. Vittorio De Cigna set up three Lakhovsky medical clinic centers in Genoa, Milan and Rapallo. Dr. Boris H. Vassileff died in Genoa in 1981 at the age of 85 years. A special thanks to Luciano Bezerédy, who knew Boris Vassileff and witnessed the use of MWO, for his kind cooperation.
